

Year 1 Topic

Flight

Lesson 6 Week beginning 1st June 2020

LO: To be able to predict, design and test an experiment using a range of material types and sizes.

Can we make our own aeroplane?

Look at the picture of an aeroplane.

Can we label the different parts? What else do you notice about it?

Today you are going to have a go at making your own paper aeroplane that flies.

Think about the features of a plane.

If you can, play the game below to learn what a plane needs to fly.

www.childrensmuseum.org/forces-of-flight/source/

Of course, your aeroplane will not have an engine so you are going to use force (you throwing it) to make it move. Did you succeed in making it fly?
