

Year 1 Topic

Flight

Lesson 2

How does a kite stay in the air?

LO: To understand how a kite stays in the air

A kite is an object made from light material and stretched over a frame. It will lift off the ground and fly when it is tilted into the wind.

Have a go at making your own kite. You can use a plastic bag like in the video clip, newspaper or tissue paper.

https://www.youtube.com/watch?v=IlzJa4poU_c

Take your kite outside and see if you can get it to fly. If you can't get it to fly, think why not.

If you can't do this, design your own kite and write a sentence to explain how a kite works.
