

Lesson 1 – 06.07.2020

LO: Add 2-digit and 1 digit numbers not crossing tens

Success Criteria:

1. Read the explanation and remind yourself how to use a number for addition
2. Use the number lines to work out the addition calculations
3. Draw your own number lines to work out what number the children finish on when they add the numbers together

Model:

1. When we add numbers together, we can use a number line.

I can use the base ten and number line below to work out what $15 + 6$ is:

I begin at 15 and count on 6.

So $15 + 6 = 21$

2. Now you try:

a) Use the base ten and number line below to work out what $45 + 4$ is:

$45 + 4 = 49$

b) Use this number line to work out what $42 + 6 = 48$

3. Draw a number line to find out what number the children finish with:

a) 58

b) 32

Task 1

Practice

Year 2s use a number line and Year 3s use column method to solve these addition calculations:

a) $24 + 37 = 61$

b) $66 + 26 = 92$

c) $13 + 58 = 71$

d) $23 + 49 = 72$

e) $55 + 38 = 93$

f) $27 + 25 = 52$

Task 2

Practice

Year 2s use a number line and Year 3s use column method to check if these addition calculations are True or False:

a) **False, it equals 64**

True or false?

	T	O
	3	5
+	2	9
	5	4

b) **False, it equals 60**

True or false?

	T	O
	1	8
+	4	2
	5	0

c) **False, it equals 57**

True or false?

Task 3

Reasoning

Explain your answers.

3a. Scarlett says,

$37 + 34 = 61$

T	O
	.

Is she correct? Prove it.

Scarlett is incorrect. She has forgotten to add the extra 10 after exchanging the ten ones. The answer should be 71

6b. Chloe says,

$\begin{array}{r} 25 \\ + 67 \\ \hline 92 \end{array}$

T	O
	..

Is she correct? Prove it.

Chloe is correct. She has remembered to exchange ten ones for one ten. She has added this ten to the tens column correctly.

9a. Jack says,

Fifty-eight add thirty-six equals eighty-four.

Is he correct? Prove it.

Jack is incorrect. He has forgotten to add the extra 10 after exchanging the ten ones. The answer should be 94.

Task 4

Problem solving

4a. Cindy has a number shown below:

Which number below can be added to Cindy's to equal 83?

- A. 28 B. 26 C. 27

B

5a. When added together, the numbers must total more than 62.

A.

T	O
..	..
.	..
.	..

 B. 28

C. 26 D.

T	O
..	..
.	..
.	..

Match the numbers above to create two pairs.

A and B; C and D

Can you create a calculation where there will be an exchange in the ones and your answer will have two ones and be less than 100?

There are lots of possible solutions.

E.g. $33 + 29 = 62$

Challenge

$$13 + 29$$

$$19 + 23$$

$$14 + 28$$

$$18 + 24$$

$$15 + 27$$

$$17 + 25$$

$$16 + 26$$

All the pairs of
ones add up to 12
