

Summer week 6 Lesson 1 – 01.06.20

Starter – complete as many as you can in 5 Mins

Round these numbers to the nearest whole

- 1) 3.94 → 4 2) 12.14 → 12 3) 23.2 → 23
4) 15.26 → 15 5) 14.52 → 15 6) 12.38 → 12
7) 90.82 → 91 8) 24.59 → 25 9) 63.08 → 63
10) 29.51 → 30 11) 38.74 → 39 12) 118.4 → 118

Round these numbers to the nearest tenth

- 1) 4.83 → 4.8 2) 1.94 → 2 3) 15.28 → 15.3
4) 19.31 → 19.3 5) 3.97 → 4 6) 0.74 → 0.7
7) 7.016 → 7.0 8) 19.372 → 19.4 9) 90.024 → 90.0
10) 83.23 → 83.2 11) 9.567 → 9.6 12) 0.417 → 0.4
-

Summer week 6 Lesson 1 – 01.06.20

LO: To recognise angles on a straight line

Success Criteria:

- | |
|---|
| 1. Remember there are 180 degrees in a straight line. |
| 2. Look to see what angle / angles you already know. |
| 3. Subtract these amounts from 180 to find the missing angle. |

Model

Now complete these:

1a. Match the facts.

Degrees on a straight line	X	90
Degrees in a right angle		180

2a. True or **false**

$$50^\circ + 140^\circ = 180^\circ = 190^\circ$$

3a. Calculate the missing angle.

$$180^\circ - 70^\circ = 110^\circ$$

4a. Work out the missing angle from the given angle.

$$180^\circ - 130^\circ = 50^\circ$$

Summer week 6 Lesson 1 – 01.06.20

LO: To recognise angles on a straight line

Success Criteria:

- | |
|---|
| 1. Remember there are 180 degrees in a straight line. |
| 2. Look to see what angle / angles you already know. |
| 3. Subtract these amounts from 180 to find the missing angle. |

Model:

Task 1

5a.

Degrees on a straight line	270
Degrees in a right angle	180
Degrees in 3 right angles	90

6a. **False** as $93^\circ + 97^\circ = 190^\circ$

7a. **107°**

8a. **49°**

Task 2

9a.

Degrees on 3 straight lines	450
Degrees in 5 right angles	540
Right angles on one side of 60 straight lines	120

10a. **True**

11a. **107°**

12a. **37°**

Task 3

7. True or false? Both missing angles marked x are 32° .

False. Line A has a missing angle of 32° but line B has a missing angle of 23° .

8. Which line has a missing angle of 63° ?

Line c has a missing angle of 63 degrees

9. Betty thinks that her missing angle is half the size of Dan's missing angle.

Is she correct? Explain your answer.

Betty is incorrect. Her missing angle = 45° as $180^\circ - 63^\circ = 117^\circ$. A right angle – one fifth = 72° so $117^\circ - 72^\circ = 45^\circ$ and Dan's missing angle is 78° as $180^\circ - 9^\circ = 171^\circ$. A right angle – $9 \times 9 = 9^\circ$ so $171^\circ - 9^\circ = 162^\circ$. Therefore, Betty's angle is not half the size of Dan's as if it was, it would be 39° .
