Playdough recipe = <https://www.bbc.co.uk/teach/class-clips-video/teeth/zr8ygwx>

Word Bank

Teeth
Incisors
Molars
Canines
Jaw
Digestion
Chew
Saliva

Feel your teeth with your tongue.

Do all your teeth feel the same?

Every time we smile, frown, talk, or eat, we use our mouths and teeth. Our mouths and teeth let us make different facial expressions, form words, eat, drink, and begin the process of digestion.

The mouth is essential for speech. With the lips and tongue, teeth help form words by controlling airflow out of the mouth. The tongue strikes the teeth or the roof of the mouth as some sounds are made.

When we eat, our teeth tear, cut, and grind food in preparation for swallowing. The tongue helps push food to the teeth, and allows us to taste the food we eat.

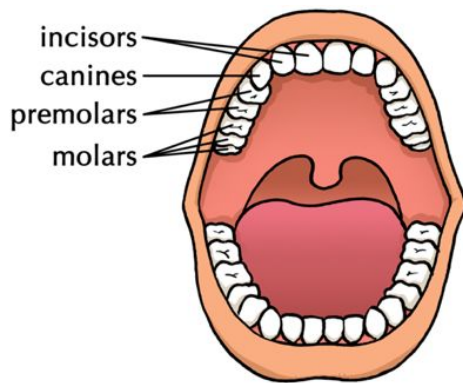

Task 1 (Recap): Watch the first video about 'Teeth'

Why do we need to keep teeth healthy? What do we need our teeth for?

Why do we have different types of teeth in our mouth?

Take a bite of an apple and see what happens in your mouth. How do the different teeth work? Do some work better than others?

Task 2: Make playdough, or use clay,

to create a model of your bottom row of teeth. Use the mirror to see them whilst making, or ask someone to take a picture! How many teeth are there?

Task 3: Write a description of the different teeth in a human mouth. Make sure your description answers the following questions: What shape are they? Where are they positioned in the mouth and what is their job.

Word bank: grind, bite, tear, pointed, large and flat, thin and sharp.

Molars are for.....

Incisors are for.....

Canines are for

Task 4: On the right are two jaws of different animals. Look at the different types of teeth they have. Which animals do they belong to and why? Can you tell what they eat by their teeth?
